

HEALTH, WELLNESS, & CLIMATE ADMINISTRATION

The new MS in Health, Wellness, & Climate Administration gives students an opportunity to connect sustainability and public health in order to address the challenges of climate change in a variety of settings.

Students in this program take courses in three areas: natural resources, health administration, and business. The MS is 34 credits and is housed entirely online. Students will complete four credits of advisement as they complete their community impact project at the end of the program.
